

DIGIFORM+
Customize your frames!

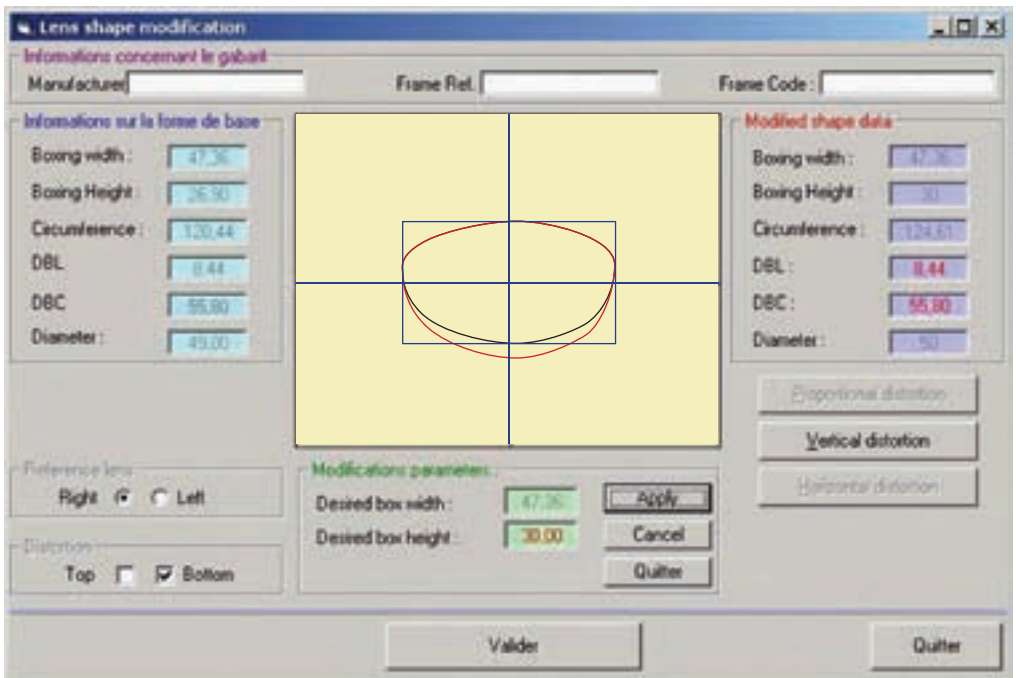

Digiform+

Who has never faced an insufficient height problem when fitting a progressive lens into a very narrow frame?

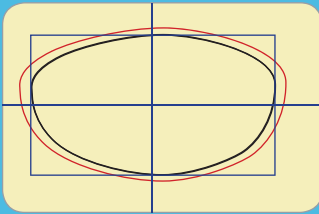

Your customer likes this rimless frame but his face is too large?

Thanks to the Briot Digiform + software available on the Briot Accura and Silver ranges, you can now simply say goodbye to complex and time-consuming pattern cutting processes

BRIOT is proud to present the ultimate solution for your comfort and your customer's satisfaction: Digiform + will help you produce taylor made shapes for a personalised customer service

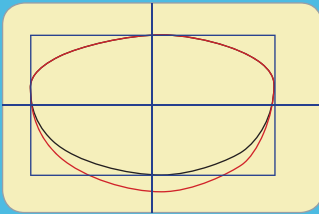

Possible shape modifications

Proportional modification

Used to increase/decrease a shape proportionally

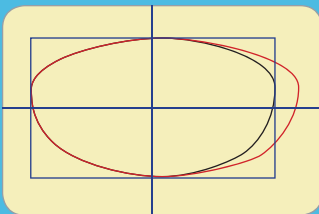

Example: from a pattern in size 48, you can easily create the exact same shape in size 52

Vertical modification

Probably the most useful shape modification, dedicated to near vision fitting in narrow rimless frames

Example: your customer likes this narrow rimless frame but he needs progressive lenses, you can easily add a few millimeters at the bottom of the shape to fit the near vision he needs

Horizontal modification

Used to adapt any rimless frame to wide faces

Example: your customer likes this rimless frame but his face is much too large, you can easily increase the width of the lenses to fit your customer's face size

Digiform+ is not only a shape modification software, it also allows you to

Store your detailed workshop jobs for years

Full jobs can be created containing customers names, RX information, pupillar distances and height, edging details (type of bevel, lens material & coatings...)

Store thousand of shapes in the integrated memory

Original and modified shapes can be stored in the software database with their brand name, model reference and size

Computer requirements

- Pentium IV 1 GHz minimum
- 256 Mb Ram
- 1 USB port available
- 1 RS232 port available
